The Risk Based Planning Assumptions (RBPA) utilised by WYFRS place greatest emphasis on the likelihood of incidents occurring where there is a risk to people. Three different classifications of incidents are utilised, these being:

Life – Potential for incidents to involve rescues, injuries or fatalities including private dwellings, or other sleeping risks.

Property – Incidents occurring in properties other than those included within the Life risk.

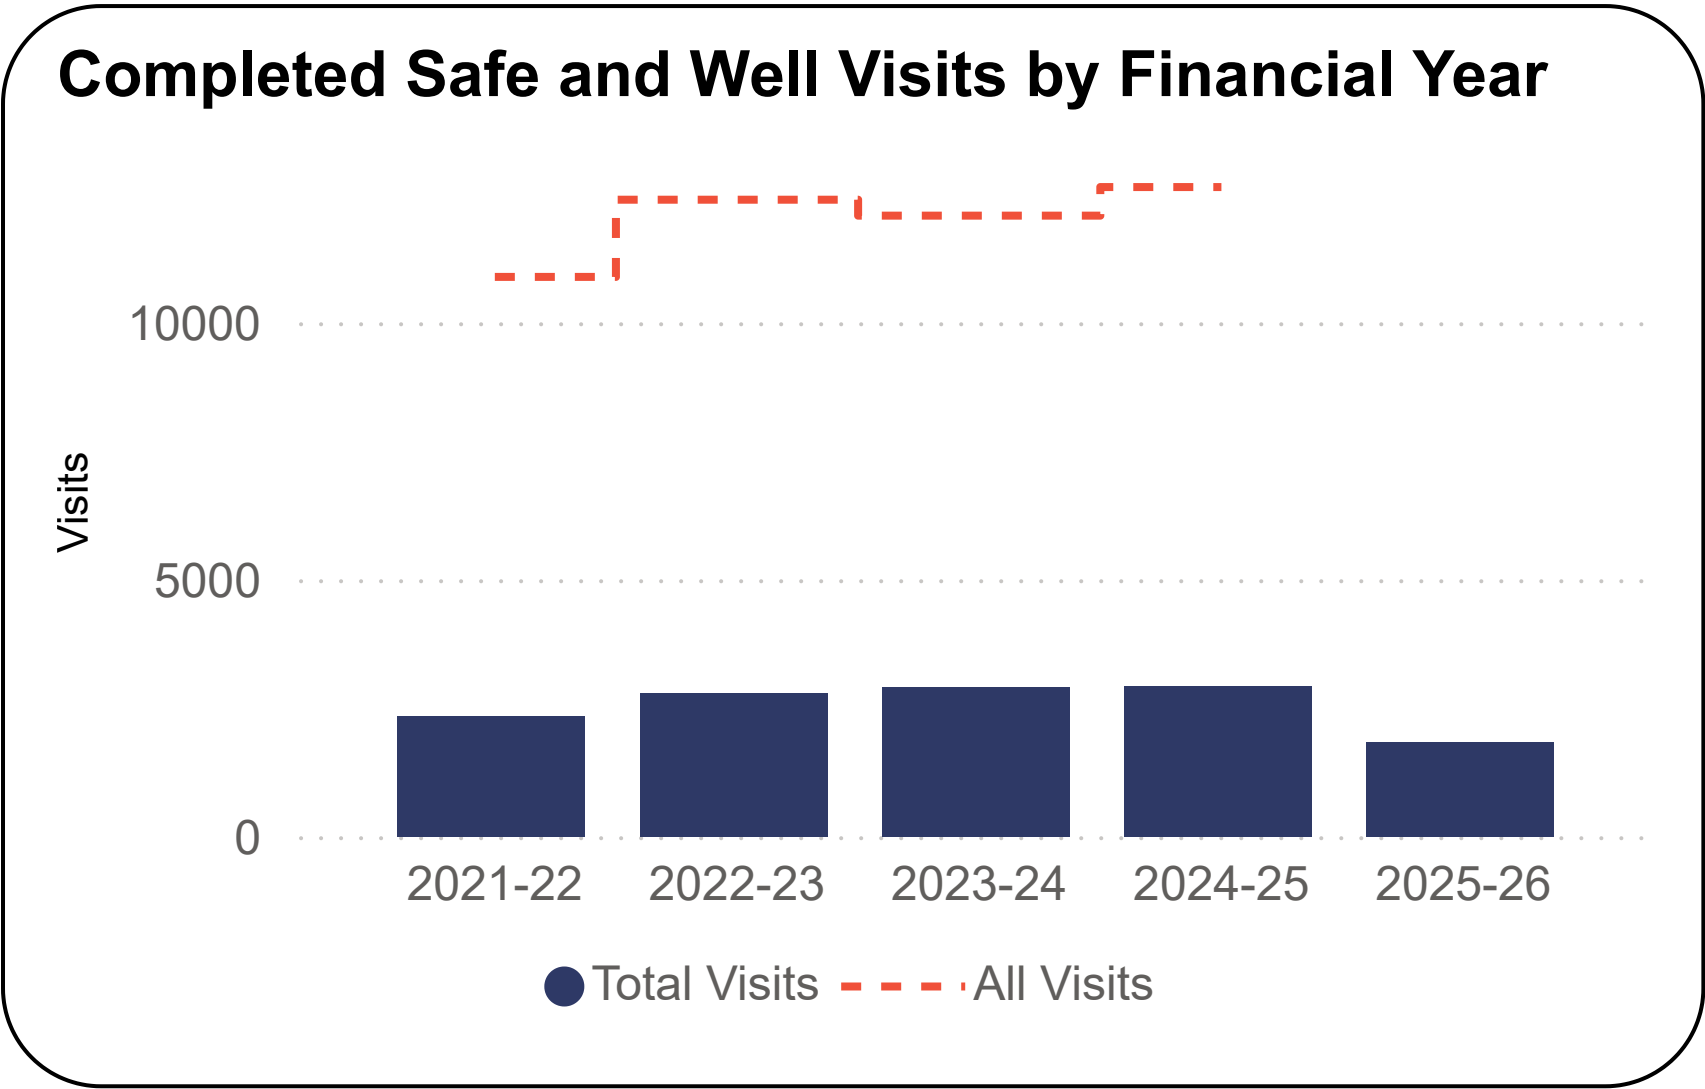

Other – All other incidents not included within the descriptors for Life and Property risk including secondary fires, false alarms and non-fire related incidents where there is no risk to human life.

The RBPA’s are underpinned by a comprehensive risk assessment for WYFRS.

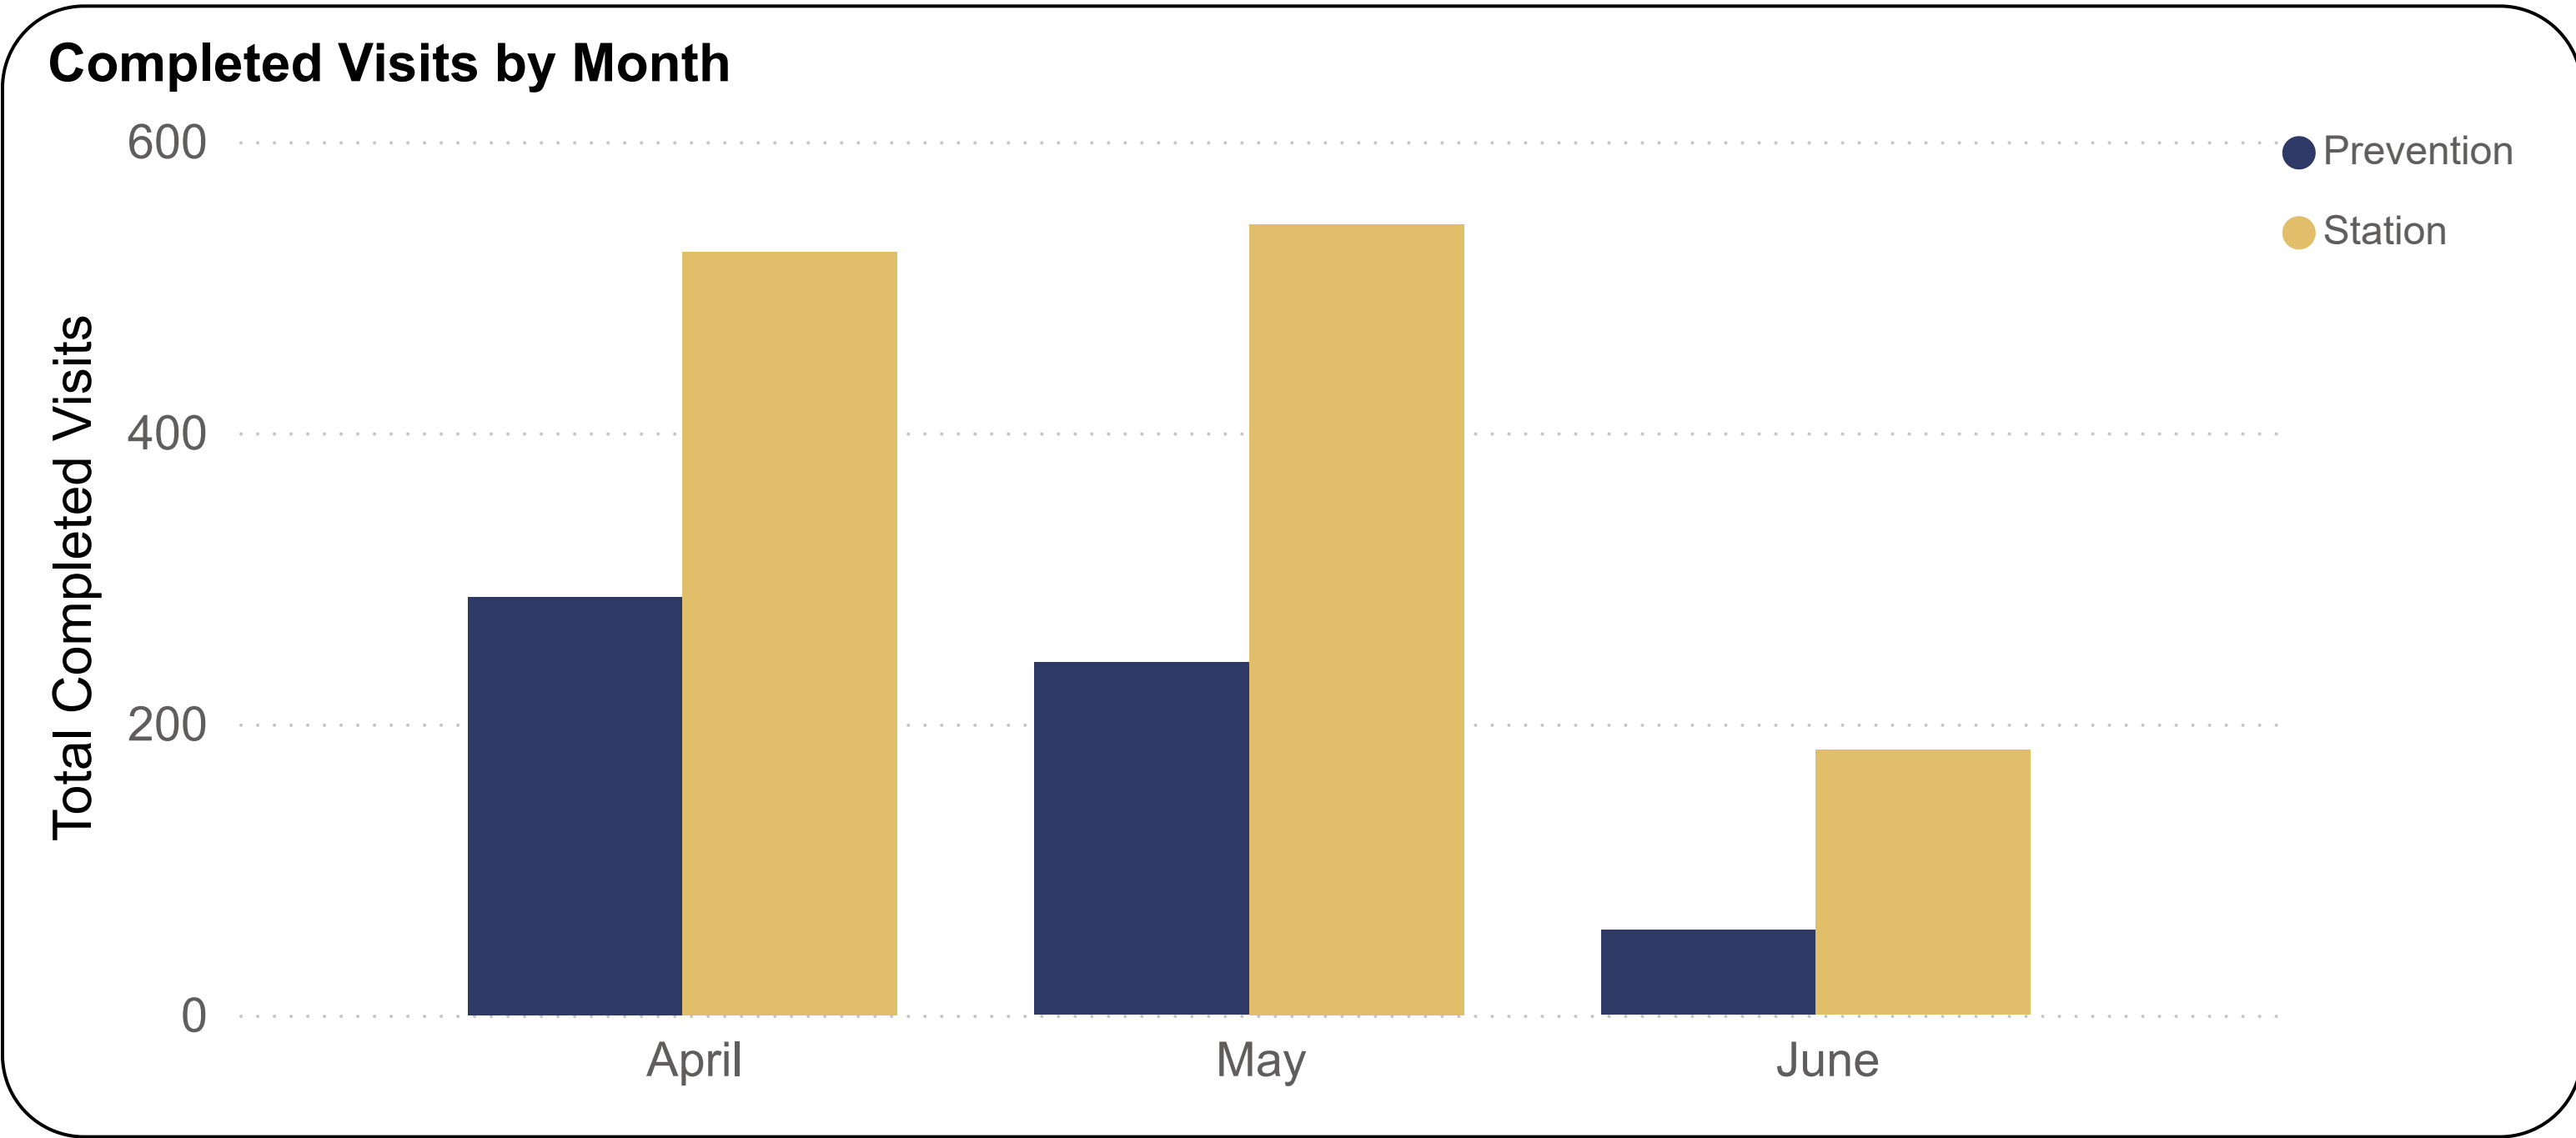

Safe and Well Visits

01 April 2025

08 June 2025

All Visits (red dotted line) shows the total figure for the financial year.
The bars show the value for selected date range.

The Safe and Well programme is the flagship prevention activity within WYFRS. We target vulnerability through a simple risk rating process and then visit people in their homes to offer information, advice and safety equipment. The risk rating process is to ensure that we are providing our resources to those who need it most.

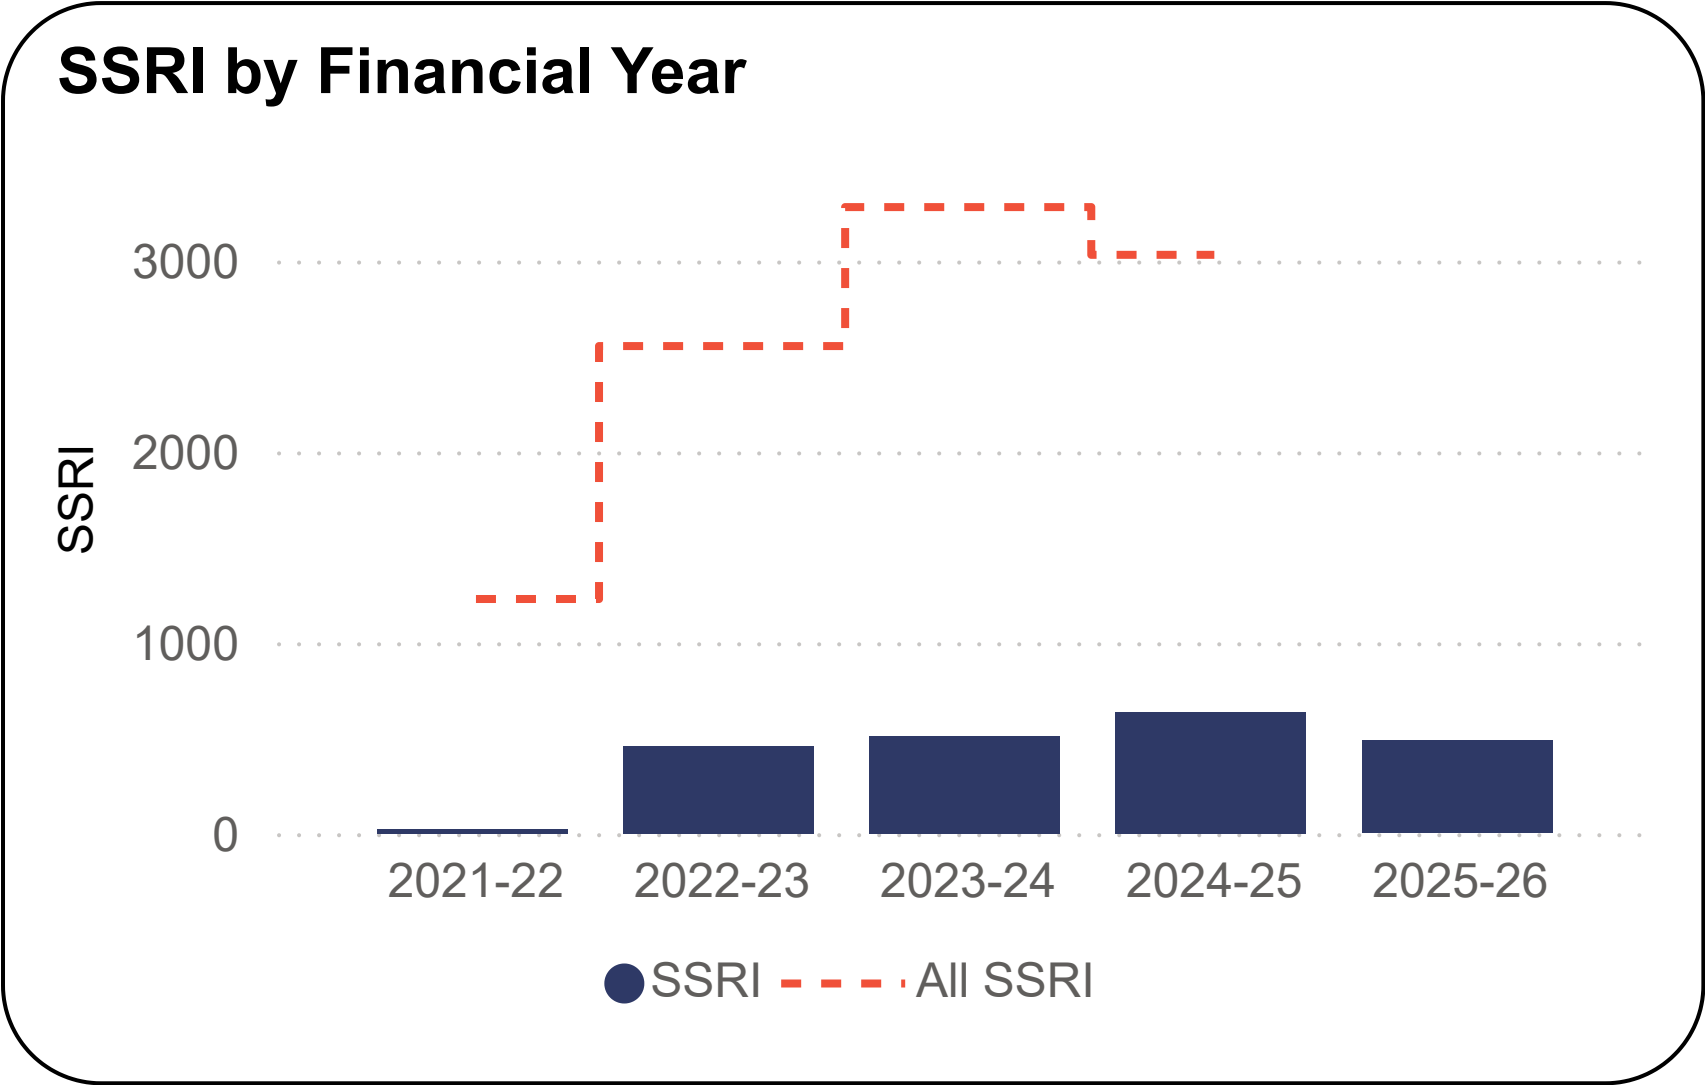

People can be referred to WYFRS from partner organisations, self-refer or we can identify the need for a Safe and Well Check during operational incidents.
It also covers a broader assessment of vulnerability against a number of other elements, including:

- Frailty and falls
- Social Isolation
- Winter Cold
- Crime
- Smoking

Site Specific Risk Inspections (SSRI)

01 April 2025

08 June 2025

All SSRI (red dotted line) shows the total figure for the financial year.
The bars show the value for selected date range.

SSRIs are generated from operational liaison referrals, post fire visits and what crews identified as perceived risks within their station area.

SSRIs are allocated to each District which are then allocated to stations/watches.

The Operational Risk Management Team centrally audit 100 percent of all SSRIs. This ensures a standard approach to the recording and understanding of risk which in turn underpins the safety of operational crews when responding to premises considered higher risk.
